

7th Annual Statewide Energy Efficiency Forum Beyond the Energy Code: Exploring the Value of Forging Ahead

City of Los Angeles June 16, 2016

What does a reach code mean for Los Angeles?

Cool Roofs

- As of October 1, 2014, the LA Green Building Code requires roofing material in residential buildings meet certain values for the "aged solar reflectance" and "thermal remittance" or for "SRI"
- Exceptions:
 - Roof repair
 - Roof replacement when the roof area being replaced is equal to or less than 50% of the total roof area
 - Where building integrated photovoltaic (BIPV) are installed
 - Permits issued prior to January 1, 2015 for the replacement of an existing roof with asphalt roof shingles or asphalt composition roll roofing

	Min. 3-yr Aged Solar Reflectance	Min. Thermal Emittance	SRI
Low-slope ≤ 2:12	0.63	0.75	75
Steep-slope > 2:12	0.20	0.75	16

What does a reach code mean for Los Angeles?

Water code changes

As of June 6, 2016 the LA Green Building Code requires:

- commercial and residential buildings to install plumbing fixtures and fittings to ensure a 20% reduction of water use;
- a water budget for landscape irrigation consistent with the statewide Model Water Efficient Landscape Ordinance;
- sub-metering in new multi-family dwellings and commercial buildings over 50,000 square feet; and
- additional water conservation measures to reduce water use and maximize the use of recycled water and graywater.

What does a reach code mean for Los Angeles?

Existing Buildings!!!

- LADWP adopted a target to achieve 15% of their energy supply mix through efficiency efforts by 2020; 50% more aggressive and three years earlier than required by the state.
- Mayor Garcetti signed an Executive Directive to reduce per capita potable water use by 20% by 2017 and reduce DWP's purchase of imported potable water by 50% by 2024.
- Statewide program in progress through AB 758 to reduce energy use in all existing buildings statewide and Governor Brown's water mandates.

December 3rd, 2014: City Council Motion 14-1478 initiated an effort to:

" convene a stakeholder process to develop a program to improve the energy and water efficiency of existing buildings."

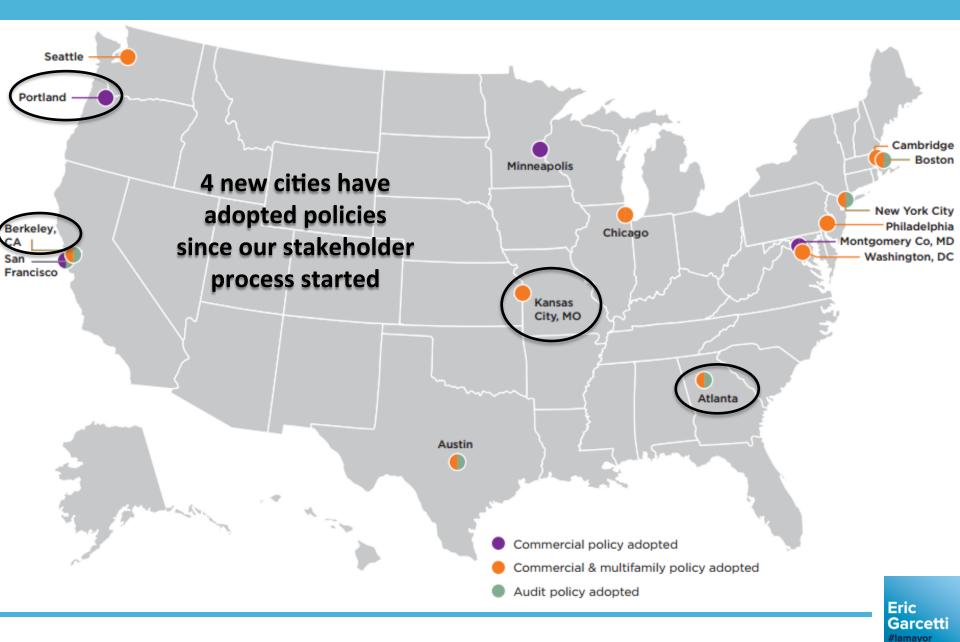

Consistent with State and City Efforts

- SB 350, the Clean Energy and Pollution Reduction Act of 2015 ("Golden State Standards") adopted
 - Double energy efficiency
 - 50% of electricity from renewable resources
- AB 758 Action Plan adopted
- LA's Sustainable City pLAn released
 - 30% reduction in energy use per square foot by 2035
 - 25% reduction in water use per capita by 2035
 - 80% reduction in GHG emissions by 2050

Large buildings are located throughout the city

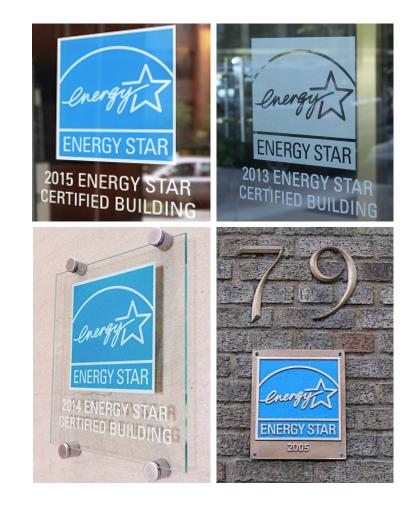

Building Size Categories (Square Feet)

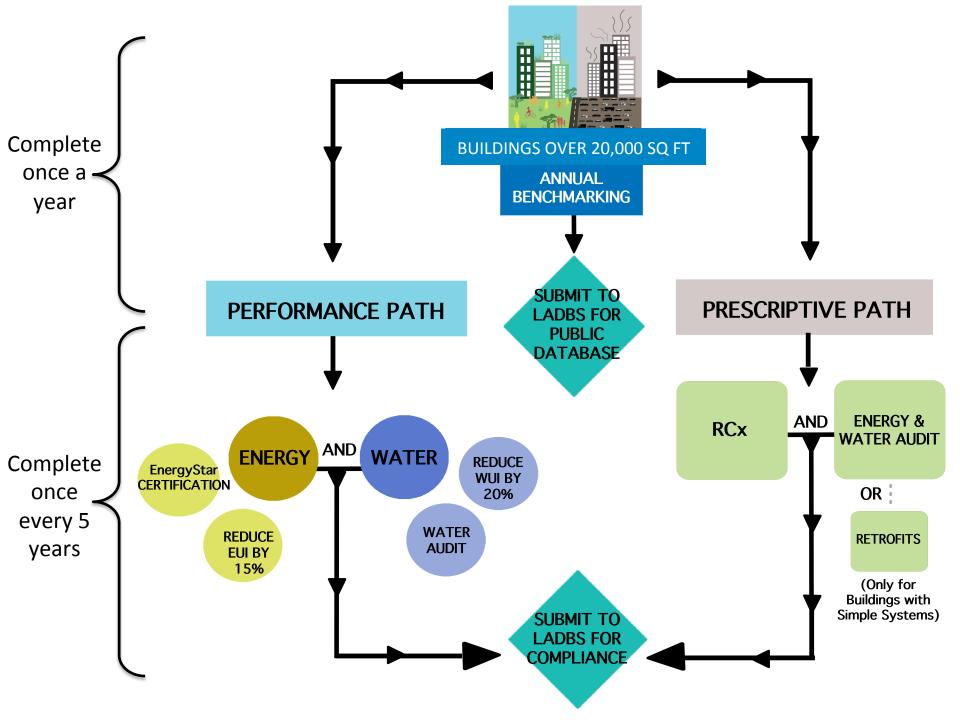

Policy Program Overview

- Buildings will be required to benchmark their energy and water use using Energy Star Portfolio Manager and submit key output to the Department of Building and Safety once a year
- Benchmarking output information will be available on a public website
- Building owners will opt into one of two pathways to reduce energy and water consumption once every five years

Eric Garcetti #lamayor

Supporting Programs and Organizations

• Support building owners to take early action

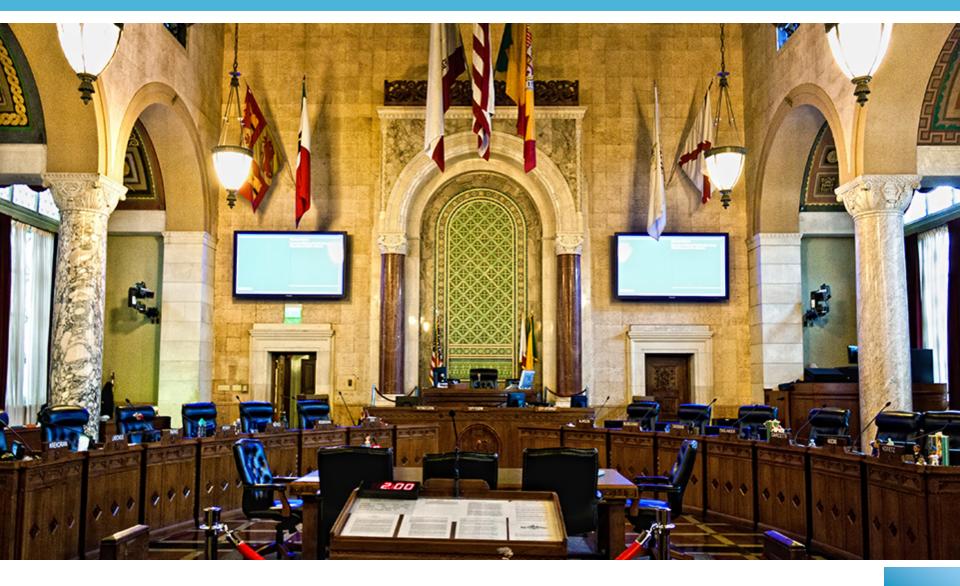

• Offer various programs to assist with financing

• Conduct outreach to educate building owners and property managers
